## INTAKT – Improve your trainees' personal and professional development

The EVST Project provides your trainees with an opportunity to participate successfully in an established LdV Mobility-Program.

## What is an EVST (European Vocational Skills Training) Project?

EVST-projects offer more than a classic work-placement: Participants take responsibility for a training related project working on professional and intercultural topics. They research information, visit companies, talk with representatives of their occupational area, make surveys and talk with members of the public.

**Learning outcomes and project tasks are defined before and you can be involved.**

The participants present their findings in different project results:

written reports, glossaries, diagrams, videos, commented slideshows, audiofiles, websites, brochures and more.

**Our participants' feedback shows that the vast majority of our participants returns and ...**

- can carry out tasks more independently
- are enthusiastic about their stay abroad and more motivated in their vocational training
- have found new ways of solving problems and coming up with solutions
- have learnt to deal with diversity
- have improved their language & communication skills
- have created tangible results they can proudly present to large audiences
- have learnt to organize a complex/larger set of set of tasks either individually or as a responsible member of a team

**Offering EVST opportunities abroad can make you a much more attractive employer!**
